

Mist brush

Axis of rotation.

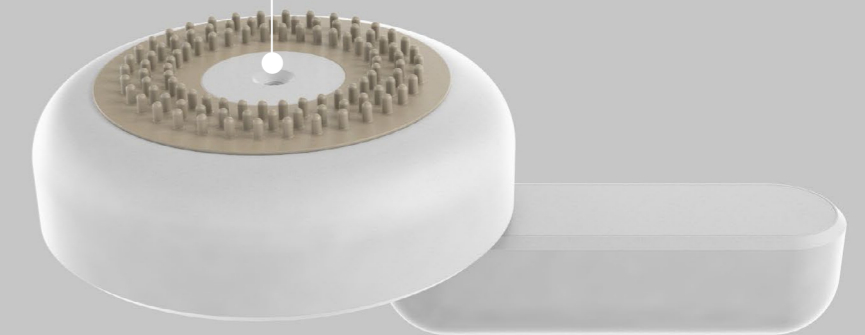

Removable silicone massage and cleaning pad.

Button to release the lock to turn the handle.

Mist diffuser.

What?

Mist brush is a device that helps old people, disabled people to wash themselves (alone or with the help of a nurse or family member), without having to go to the bathroom.

How?

Today, devices such as a nebulizer or aroma diffuser turn the liquid into a mist that is pleasant to humans – thanks to the **Ultrasonic** or **Mesh** technology.

Mist brush cleans thanks to a mist consisting of water with a natural detergent.

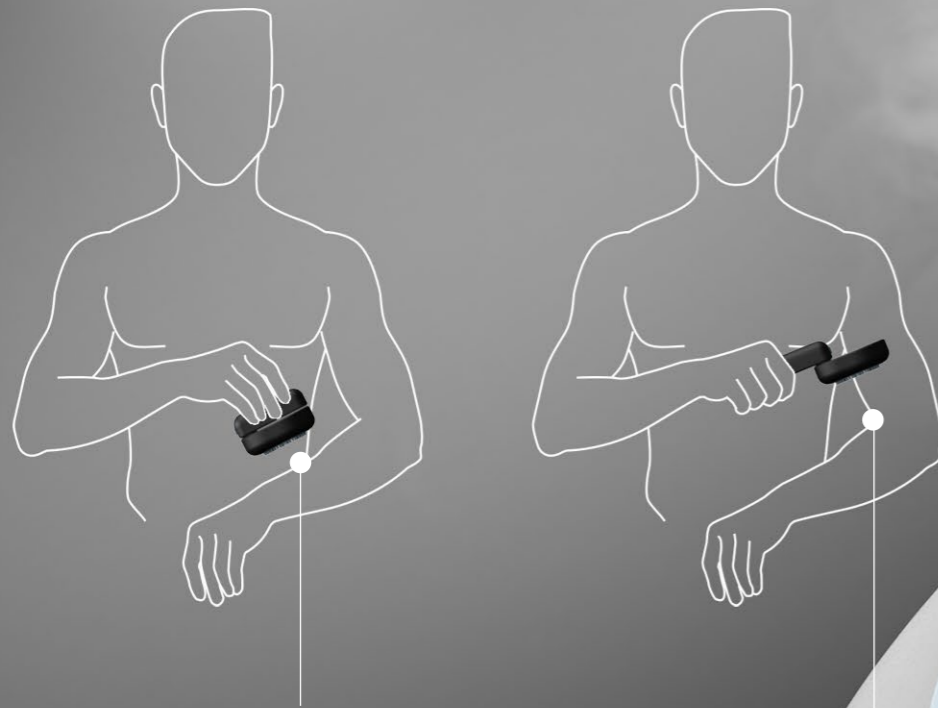

Why?

Currently, people who cannot use a traditional bath or shower are washed with special wipes - which is then waste. The solution is also perfect for everyone - during holidays in difficult conditions, outside the city.

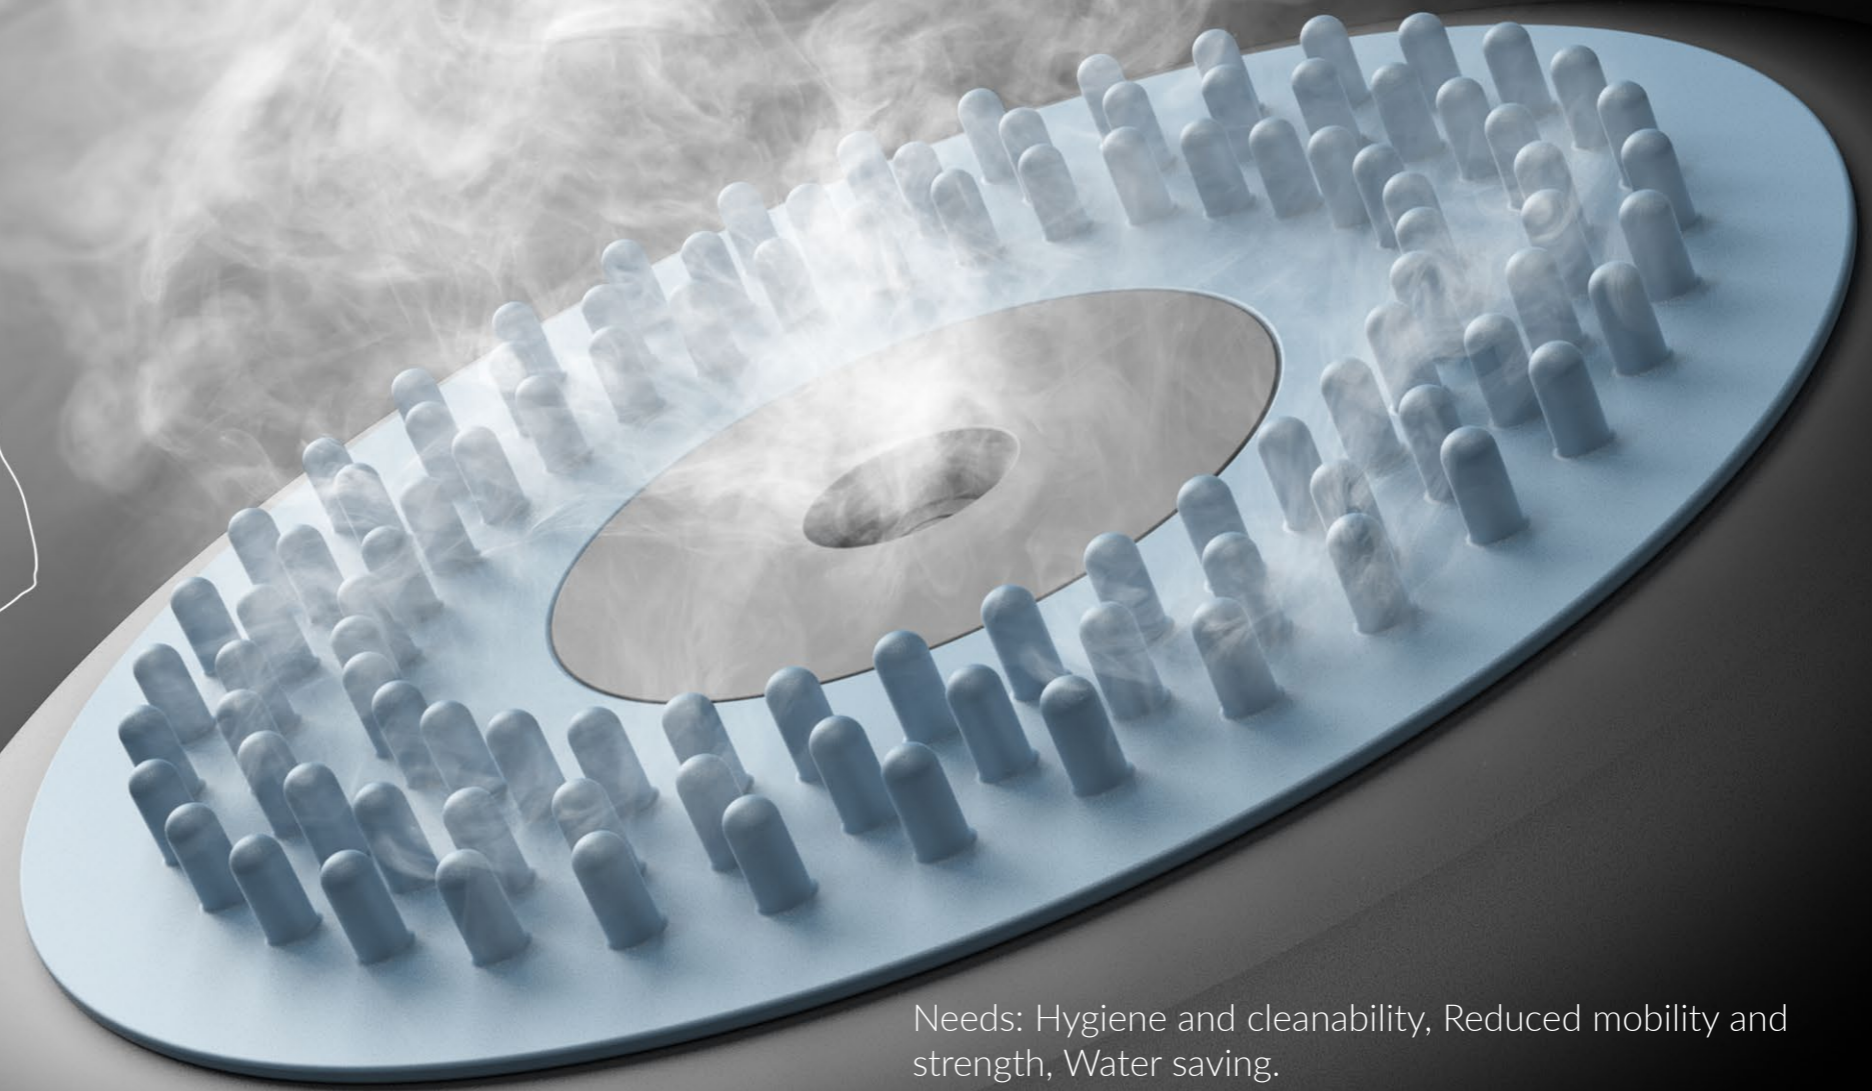

A base that cleans the device and charges it.

Ergonomic handle allows for various uses of the brush.

People with reduced mobility cannot always count on the daily help of a strong, and qualified caregiver to help the patient bathe. On days when there is no social worker - the solution will primarily allow for daily body hygiene, which can be done alone, or with the help of any family member.

Needs: Hygiene and cleanability, Reduced mobility and strength, Water saving.

Ultrasonic or Mesh mist is pleasant on the body - it isn't hot.

After purchasing the device - the manufacturer benefits from the service consisting in selling the cleaning agent.
